About Google Scholar

Stand on the shoulders of giants.

Google Scholar provides a simple way to broadly search for scholarly literature. From one place, you can search across many disciplines and sources: articles, theses, books, abstracts and court opinions, from academic publishers, professional societies, online repositories, universities and other web sites. Google Scholar helps you find relevant work across the world of scholarly research.

Features of Google Scholar

- Search all scholarly literature from one convenient place
- Explore related works, citations, authors, and publications
- Locate the complete document through your library or on the web
- Keep up with recent developments in any area of research
- Check who's citing your publications, create a public author profile

Questions

Google Scholar Citations

Google Scholar Citations provide a simple way for authors to keep track of citations to their articles. You can check who is citing your publications, graph citations over time, and compute several citation metrics. You can also make your profile public, so that it may appear in Google Scholar results when people search for your name, e.g., [richard feynman](#).

Best of all, it's quick to set up and simple to maintain - even if you have written hundreds of articles, and even if your name is shared by several different scholars. You can add groups of related articles, not just one article at a time; and your citation metrics are computed and updated automatically as Google Scholar finds new citations to your work on the web. You can choose to have your list of articles updated automatically or review the updates yourself, or to manually update your articles at any time.

About Google Scholar

Google Scholar

About Search Citations Inclusion **Metrics** Publishers Libraries

Search Scholar

Google Scholar Metrics

Available Metrics

The **h-index** of a publication is the largest number h such that at least h articles in that publication were cited at least h times each. For example, a publication with five articles cited by, respectively, 17, 9, 6, 3, and 2, has the h-index of 3.

The **h-core** of a publication is a set of top cited h articles from the publication. These are the articles that the h-index is based on. For example, the publication above has the h-core with three articles, those cited by 17, 9, and 6.

The **h-median** of a publication is the median of the citation counts in its h-core. For example, the h-median of the publication above is 9. The h-median is a measure of the distribution of citations to the articles in the h-core.

Finally, the **h5-index**, **h5-core**, and **h5-median** of a publication are, respectively, the h-index, h-core, and h-median of only those of its articles that were published in the last five complete calendar years.

We display the h5-index and the h5-median for each included publication. We also display an entire h5-core of its articles, along with their citation counts, so that you can see which articles contribute to the h5-index. And there's more! Click on the citation count for any article in the h5-core to see who cited it.

Bagaimana artikel kita bisa dikenal/diindeks oleh google scholar?

- Ingat! Bahwa hanya artikel yang di-online-kan saja yang bisa dideteksi oleh google scholar.
- Semakin banyak artikel kita yang online, semakin besar kemungkinan artikel kita untuk "dikenal" oleh google scholar.
- Paper yang mengutip artikel kita, juga harus online untuk dideteksi oleh google scholar.
- Kenalkan karya akademik melalui www.academia.com

Ranking of scientists in Indonesian Institutions according to their Google Scholar Citations public profiles

Fourth edition

This edition was built with data collected during the **second week of October 2015** from the public profiles of researchers working in Indonesian (Indonesia, Asia) institutions. It is a **BETA** Ranking of the scientists according to their declared (voluntarily) presence in the Google Scholar Citations database. We advise to those interested in appearing in future editions to sign into these databases, correcting and updating their public profiles.

There are still **MANY mistakes and gaps** in the list, so please contact us (isidro.aquillo@csc.es) if you discover any of the errors for solving them promptly.

The list consists of the **Top 1000 profiles** (including former PhD students and no-longer members who signed papers in the past with this affiliation) ranked first by h-index in decreasing order and, when ties appear, then by the total number of citations as a secondary criteria.

More lists ...

World

How to set up your own profile (and few advices and warnings)

There are several presentations with easy instructions that can help you in the process. We cite these two slides collections in English and Spanish:

* [How to set up your Google Scholar profile in Google Scholar Citations \(Sarah Goodier\)](#)

* [Como crear perfil de investigador en Google Scholar Citations \(Julio Alonso Arévalo\)](#)

Please, follow the following advices and take into account the warnings about nasty practices:

- **Make the profile public!**
- **Delete duplicate old profiles. Entries marked # means there are other profiles for the same author.**
- Identify yourself with your standard signature name (not inverse)
- Provide information about your affiliation, including institution name, city and country
- Use an institutional email account
- Use keywords in English (about 5) for allowing comparisons with international colleagues
- Preferably, neither general terms (physics, chemistry, medicine) nor very specific ones
- **Hey! Delete all these entries not being authored by you!**
